

Module: Admin

pawguard/modules/admin — API prefix: /admin/audit-logs, /admin/dashboard

PawGuard Backend | FastAPI 3.13 + PostgreSQL 17 + Redis/ARQ + S3 | Generated from repo @ commit 99a8430 (2026-08-12)

1. Purpose

Cross-module administration surface: system-wide audit-log viewing (audit_router) and an admin analytics dashboard (dashboard_router) aggregating KPIs across shelters, rescues, adoptions, and finance for super-admin users.

2. Position in the Layered Architecture

Client → Router (auth+validate) → Service (business logic) → Repository (data access) → PostgreSQL

Like every module in this codebase, business rules live only in the Service layer; Routers authenticate/authorize/validate and Repositories perform data access with no business decisions (see AGENTS.md — the project's engineering constitution).

3. Data Model

This module does not own its own tables directly — it reads/writes through other modules' repositories (see Notes below).

4. API Endpoints (19 total)

Method	Path	Permission Required
GET	/admin/audit-logs	system:admin
GET	/admin/audit-logs/export	system:admin
GET	/admin/audit-logs/{entry_id}	system:admin
GET	/admin/audit-logs/metrics	system:admin
GET	/admin/audit-logs/summary	system:admin
GET	/admin/audit-logs/kpis	system:admin
GET	/admin/audit-logs/charts	system:admin
GET	/admin/audit-logs/recent-activity	system:admin
GET	/admin/audit-logs/inventory-alerts	system:admin
GET	/admin/audit-logs/donation-summary	system:admin
GET	/admin/audit-logs/rescue-stats	system:admin
GET	/admin/audit-logs/medical-stats	system:admin
GET	/admin/audit-logs/adoption-stats	system:admin
GET	/admin/audit-logs/volunteer-stats	system:admin
GET	/admin/audit-logs/notification-summary	system:admin
GET	/admin/audit-logs/shelter-stats	system:admin
GET	/admin/audit-logs/foster-stats	system:admin
GET	/admin/audit-logs/lost-found-stats	system:admin
GET	/admin/audit-logs/grievance-stats	system:admin

Distinct permission codes used: system:admin

6. Notable Implementation Details

- Read-mostly module: no owned database tables of its own — queries across other modules' repositories.
- Audit endpoints expose the AuthAuditEventType log written by auth, lost_found, donation, and other modules.
