

Module: Adoption

pawguard/modules/adoption — API prefix: /adoptions

PawGuard Backend | FastAPI 3.13 + PostgreSQL 17 + Redis/ARQ + S3 | Generated from repo @ commit 99a8430 (2026-08-12)

1. Purpose

Manages the adoption pipeline for shelter dogs: applications, approval workflow, contracts, and post-adoption follow-ups.

2. Position in the Layered Architecture

Client → Router (auth+validate) → Service (business logic) → Repository (data access) → PostgreSQL

Like every module in this codebase, business rules live only in the Service layer; Routers authenticate/authorize/validate and Repositories perform data access with no business decisions (see AGENTS.md — the project's engineering constitution).

3. Data Model — Owned Tables

Model Class	Table Name
AdoptionApplication	adoption_applications
AdoptionScore	adoption_scores
