

Module: Dog

pawguard/modules/dog — API prefix: /dogs

PawGuard Backend | FastAPI 3.13 + PostgreSQL 17 + Redis/ARQ + S3 | Generated from repo @ commit 99a8430 (2026-08-12)

1. Purpose

Shelter-admitted dog master profiles: intake record, medical/behavior history, and media — distinct from owner-registered pets in companion_pet.

2. Position in the Layered Architecture

Client → Router (auth+validate) → Service (business logic) → Repository (data access) → PostgreSQL

Like every module in this codebase, business rules live only in the Service layer; Routers authenticate/authorize/validate and Repositories perform data access with no business decisions (see AGENTS.md — the project's engineering constitution).

3. Data Model — Owned Tables

Model Class	Table Name
DogProfile	dog_profiles

4. API Endpoints (13 total)

Method	Path	Permission Required
POST	/dogs	shelter:update
GET	/dogs	—
GET	/dogs/admin/dogs/{dog_id}	—
GET	/dogs/{dog_id}/timeline	shelter:read
GET	/dogs/{dog_id}/public-scan	—
GET	/dogs/{dog_id}/qr-image	shelter:update
POST	/dogs/{dog_id}/weight	shelter:update
GET	/dogs/{dog_id}/weights	shelter:read
PUT	/dogs/{dog_id}	shelter:update
PATCH	/dogs/{dog_id}/status	shelter:update
DELETE	/dogs/{dog_id}	shelter:update
POST	/dogs/bulk/status-update	shelter:update
POST	/dogs/bulk/delete	shelter:update

Distinct permission codes used: shelter:update, shelter:read

5. Key Service-Layer Operations

- bulk_soft_delete
- bulk_update_status
- get_dog
- get_dog_photo_urls
- get_dog_timeline
- get_weight_history
- list_dogs_paginated

- public_qr_url
- qr_image
- record_activity
- record_weight
- register_dog
- soft_delete_dog
- update_dog

+1 additional service methods.
