

Module: Inventory

pawguard/modules/inventory — API prefix: /inventory

PawGuard Backend | FastAPI 3.13 + PostgreSQL 17 + Redis/ARQ + S3 | Generated from repo @ commit 99a8430 (2026-08-12)

1. Purpose

Shelter supply tracking: stock levels, movement types (receipt/consumption/adjustment), and reorder triggers.

2. Position in the Layered Architecture

Client → Router (auth+validate) → Service (business logic) → Repository (data access) → PostgreSQL

Like every module in this codebase, business rules live only in the Service layer; Routers authenticate/authorize/validate and Repositories perform data access with no business decisions (see AGENTS.md — the project's engineering constitution).

3. Data Model — Owned Tables

Model Class	Table Name
InventoryItem	inventory_items
InventoryMovement	inventory_movements
RequisitionOrder	requisition_orders

4. API Endpoints (11 total)

Method	Path	Permission Required
POST	/inventory/items	inventory:create
GET	/inventory/items	inventory:read
GET	/inventory/items/{item_id}	inventory:read
POST	/inventory/movements	inventory:update
GET	/inventory/items/{item_id}/movements	inventory:read
POST	/inventory/requisitions	inventory:create
GET	/inventory/requisitions	inventory:read
PUT	/inventory/requisitions/{req_id}/status	inventory:update
DELETE	/inventory/items/{item_id}	inventory:update
POST	/inventory/items/bulk/delete	inventory:update
POST	/inventory/requisitions/bulk/status	inventory:update

Distinct permission codes used: inventory:create, inventory:read, inventory:update

5. Key Service-Layer Operations

- bulk_delete_items
- bulk_update_requisition_status
- create_item
- create_requisition
- get_item
- get_items_by_ids
- list_items
- list_items_paginated

- list_movements
- list_movements_paginated
- list_requisitions
- list_requisitions_paginated
- record_movement
- soft_delete_item

+1 *additional service methods.*
