

Module: Medical

[pawguard/modules/medical](#) — API prefix: `/medical`

PawGuard Backend | FastAPI 3.13 + PostgreSQL 17 + Redis/ARQ + S3 | Generated from repo @ commit 99a8430 (2026-08-12)

1. Purpose

Shelter-side medical record keeping for admitted dogs: treatments, vaccinations, surgeries, and clinical notes (parallel to companion_pet's owner-side medical uploads).

2. Position in the Layered Architecture

[Client](#) → [Router \(auth+validate\)](#) → [Service \(business logic\)](#) → [Repository \(data access\)](#) → [PostgreSQL](#)

Like every module in this codebase, business rules live only in the Service layer; Routers authenticate/authorize/validate and Repositories perform data access with no business decisions (see AGENTS.md — the project's engineering constitution).

3. Data Model — Owned Tables

Model Class	Table Name
ClinicalExam	clinical_exams
MedicalTreatment	medical_treatments
VaccinationRecord	vaccination_records
Prescription	prescriptions

4. API Endpoints (21 total)

Method	Path	Permission Required
POST	/medical/exams	medical:create
POST	/medical/treatments	medical:create
POST	/medical/vaccinations	medical:create
POST	/medical/prescriptions	medical:create
POST	/medical/clearance/{dog_id}	medical:clearance
GET	/medical/clearances/dogs/{dog_id}	medical:read
POST	/medical/administrations	medical:update
GET	/medical/prescriptions/{prescription_id}/administrations	medical:read
GET	/medical/dogs/{dog_id}/administrations	medical:read
POST	/medical/vaccine-protocols	medical:update
GET	/medical/vaccine-protocols	medical:read
GET	/medical/dogs/{dog_id}/history	medical:read
GET	/medical/exams	medical:read
GET	/medical/treatments	medical:read
GET	/medical/vaccinations	medical:read
GET	/medical/prescriptions	medical:read
PUT	/medical/prescriptions/{prescription_id}	medical:update
PATCH	/medical/prescriptions/{prescription_id}/status	medical:update
DELETE	/medical/{entity_type}/{entity_id}	medical:delete

Method	Path	Permission Required
POST	/medical/bulk/prescriptions/status	medical:update

+1 additional endpoints not shown — see *openapi.json* for the full list.

Distinct permission codes used: medical:create, medical:clearance, medical:read, medical:update, medical:delete

5. Key Service-Layer Operations

- administer_vaccine
- authorize_adoption_clearance
- bulk_soft_delete
- bulk_update_prescription_status
- create_vaccine_protocol
- get_administrations_for_dog
- get_administrations_for_prescription
- get_clearances_for_dog
- get_exams_for_dog
- get_prescriptions_for_dog
- get_treatments_for_dog
- get_vaccinations_for_dog
- list_exams_paginated
- list_prescriptions_paginated
