

Module: Reports

pawguard/modules/reports — API prefix: /reports

PawGuard Backend | FastAPI 3.13 + PostgreSQL 17 + Redis/ARQ + S3 | Generated from repo @ commit 99a8430 (2026-08-12)

1. Purpose

On-demand report generation (CSV/XLSX/PDF) across modules; output files are written to the generated_reports/ directory for download.

2. Position in the Layered Architecture

Client → Router (auth+validate) → Service (business logic) → Repository (data access) → PostgreSQL

Like every module in this codebase, business rules live only in the Service layer; Routers authenticate/authorize/validate and Repositories perform data access with no business decisions (see AGENTS.md — the project's engineering constitution).

3. Data Model

This module does not own its own tables directly — it reads/writes through other modules' repositories (see Notes below).

4. API Endpoints (4 total)

Method	Path	Permission Required
POST	/reports/generate	reports:create
GET	/reports/types	reports:read
GET	/reports/formats	reports:read
GET	/reports/download/{filename}	reports:read

Distinct permission codes used: reports:create, reports:read

5. Key Service-Layer Operations

- generate_report

6. Notable Implementation Details

- Generates files into generated_reports/ (CSV/XLSX/PDF already present for adoption, donation, finance, foster, inventory, medical, rescue, staff performance, volunteer).

Auto-extracted from pawguard/modules/reports/ (models.py, router(s), service.py) at repo commit 99a8430, 2026-08-12.
